Hiring Manager, Flight Test Operations
Raytheon Technologies
Ontario, CA 91761

RE: Application for Flight Test Operations Support Engineer

Dear Hiring Manager,

I am writing to express my strong interest in the Flight Test Operations Support Engineer position at Raytheon in Ontario, CA. With an MSEE from Loyola Marymount University, a BSEE from Cal Poly Pomona, and extensive hands-on experience in hardware validation, power electronics, RF systems, and R&D testing, I offer a combination of analytical engineering depth and practical bench top verification skills.

Throughout my engineering career, I have routinely executed system-level test protocols, debugged complex electronic hardware, and fabricated custom instrumentation fixtures. During my work at Alcon, I conducted critical verification and validation (V&V) on surgical consoles and PCB assemblies using high-speed oscilloscopes and logic analyzers to isolate system anomalies alongside Senior R&D Engineers. Additionally, at General Micro Systems, I built, tested, and validated ruggedized computing hardware, network switches, and routers for defense and industrial applications, authoring test procedures and deploying custom Linux and Windows scripts to automate hardware testing.

My early career as an Electrical Engineer at Hughes Aircraft provided a solid foundation in low voltage power supply (LVPS) worst-case efficiency and stability analysis (LTspice) as well as RF communications equipment alignment. Whether setting up test equipment in the lab, configuring hardware-in-the-loop setups, or troubleshooting prototype assemblies down to the component level, I maintain a strict focus on precision, compliance, and accurate data collection.

Living locally in Ontario, CA, I am eager to contribute directly to Raytheon's flight test operations and test plan execution. Thank you for your time and consideration, and I look forward to discussing how my hardware test engineering background aligns with your team's operational goals.

Sincerely,
Jim Ngo
