Hiring Manager, Hardware Test Engineering
Thales USA
Irvine, CA 92618

RE: Application for Hardware / LRU Test Electrical Engineer

Dear Hiring Manager,

I am writing to express my enthusiastic interest in the Hardware / LRU Test Electrical Engineer position at Thales in Irvine, CA. With an MSEE from Loyola Marymount University, a BSEE from Cal Poly Pomona, and extensive hands-on expertise in unit-level electronic debugging, cable/harness layout, schematic evaluation, and system hardware validation, I bring a well-rounded technical foundation suited for high-reliability electronics.

Throughout my career, I have consistently taken hardware assemblies from early schematic review and prototype fabrication through rigorous functional verification and unit qualification. At General Micro Systems, I built, debugged, and validated ruggedized computing hardware, network switches, and routers. In this role, I authored comprehensive test procedures, designed assembly and test cable setups, and executed Linux and Windows scripts to automate hardware testing.

My background also encompasses precision verification and validation (V&V) on surgical consoles and PCB assemblies at Alcon using high-speed oscilloscopes and logic analyzers, as well as root-cause failure analysis and SMT rework at Micro Analog Inc. Earlier in my career at Hughes Aircraft, I gained deep foundational expertise in low voltage power supply (LVPS) stability analyses and RF communication alignment, giving me a solid grasp of board-level and unit-level signal integrity.

Living locally in Ontario, CA, I am within a comfortable commute to your Irvine facility and fully prepared to contribute to Thales's Line Replaceable Unit (LRU) test qualification protocols, test fixture setups, and hardware issue resolution[cite: 1, 3]. Thank you for your time and consideration, and I look forward to discussing how my hardware test background aligns with your engineering goals.

Sincerely,
Jim Ngo
