RE: Application for Hardware Test Engineer (Medical Devices V&V)

Dear Hiring Manager,

I am writing to express my strong interest in the Hardware Test Engineer position for Medical Devices V&V at Enchannel Medical in Irvine, CA. Holding an MSEE from Loyola Marymount University, a BSEE from Cal Poly Pomona, and direct experience in medical device verification and validation (V&V), prototype instrumentation, and bench-top test fixture setup, I bring the exact technical skill set needed for regulated medical hardware testing.

At Alcon, I served as a Senior Electronic Lab Technician focused on verification and validation (V&V) for surgical consoles, sub-assemblies, and PCBs. Working alongside Senior R&D Engineers, I fabricated prototype instrumentation, isolated complex system-level hardware anomalies, and executed test protocols using logic analyzers and high-speed oscilloscopes. This experience provided me with a deep understanding of standard medical hardware testing frameworks (IQ/OQ/PQ) and standard electro-mechanical precision assembly.

Beyond my medical device experience, my background includes building, debugging, and validating ruggedized computing hardware and network devices at General Micro Systems, where I authored detailed test procedures and assembly instructions. Additionally, my work at Micro Analog Inc. performing ICT, functional testing, and precision SMT rework on complex analog and digital boards ensures I can troubleshoot circuit failures down to the component level.

Residing in Ontario, CA, I am well within commuting distance of your Irvine facility and excited about the opportunity to contribute to Enchannel Medical's verification protocols and test instrumentation. Thank you for your time and consideration, and I look forward to discussing how my medical hardware testing background aligns with your team's project milestones.

Sincerely,
Jim Ngo
